

SHOCK TAPE

SAY FAREWELL TO ALL BIRDS

PRODUCT INFORMATION · SHOCK TAPE · ENERGIZERS · CONNECTORS · LEAD WIRE / JUMPER WIRE · TOOLS

Shock-Tape is Safe, Simple, Silent & Effective

Bird problems can be controlled with Shock-Tape systems. Pigeons, seagulls, sparrows and other pest birds don't like being stung by electric fence. Shock-Tape is clear and looks great protecting your structure.

Bird droppings can cause damage. To keep all birds away, use this tape on signs, roof edges, window sills, roof peaks, pipes, ledges, greenhouses or historical buildings.

Bird shock systems are low energy adaptations of electric fence systems, which have been proven on farms and ranches for decades to be both effective and safe. UL® listed Energizers insure safe energy levels for birds and humans and fire safety too.

The shock-tape system constitutes a clear and tangible revolution in pigeon repellence: the results are evident on the ground, the media is supportive, and customers realize that this advanced technology gets results.

Bird Shock-Tape is self-stick with 2 wires that carry the electric pulses. Its durable, made of long lasting acrylics and high grade aluminum. Once installed, neighborhood birds walking across the 2 wires receive a harmless, but memorable sting on the foot.

Shock-Tape system – Comprehensive Pigeon And Bird Repellent Solution

Proven affectivity.

»» SHOCK TAPE IS SAFE, SIMPLE, SILENT & EFFECTIVE.

»» DETERS ALL BIRDS, WINNING ESTHETICS.

ELECTRIC SHOCK TAPE

This system features a clear tape consisting of 2 wires carrying electrical pulses bonded to a clear base. Shock tape repels any and all birds. Tape has a self-stick high bond adhesive that adheres tightly to a variety of surfaces. It molds to surfaces and is UV stabile. Solar or plug-in energizers produce pulses at levels that are safe for birds and humans.

SAFE AND HUMANE

The Shock Tape system is a low-energy adaptation of high voltage electric fences used on farms for decades. Energizers emit pulses that are harmless to birds and humans contacting the tape. Sparks won't ignite combustible materials such as dry grass and leaves because brief pulses of DC current are followed by long pauses.

HOW DOES IT WORK?

After a completed installation, the neighborhood birds return. They examine the tape and when they step across the shock tape wires, they get an uncomfortable zap. Birds jump and immediately recognize the new tape is painful. All neighborhood birds agree the tape is to be avoided. Unlike other bird control products, birds really learn not to get near the Shock Tape ever.

THE SHOCK TAPE 'RIBBON'

Ultra thin tape has a peel & stick adhesive bottom. Conforms and bonds tightly to metal, glass, stone, roofing tiles, asphalt shingles, marble, sealed wood, lintels and steel. Tape is composed of UV stable acrylic adhesives, acrylic films and pure aluminum wires. It will remain clear and won't yellow or crack. Shock Tape is so durable it may give service more than 10 years. Sold in 15 meter rolls.

SHOCK TAPE APPLICATIONS

Ideal when discrete and effective bird control is demanded. Use to repel all bird species including seagulls, pigeons, crows, starlings and sparrows. Excellent for high and low bird persistence. Apply to shapes like sign letters, tile roofs, railings, pipes, skylights, roof peaks, windows sills, beams, parapets and much more. Provides invisible, silent and long lasting protection.

SHOCK TAPE ENERGIZERS

Available in solar power, 120 Vac or 220 Vac. Energizers emit a brief pulse of DC current every 1-2 seconds. Won't injure birds or people. Each Energizer powers up to 500 meters of Shock Tape.

SHOCK TAPE SYSTEM

- Works for all birds
- Thin, flexible tape follows curves and angles
- Peel-and-stick backing for quick installation
- Bonds to most surfaces
- The clear shock tape is discreet when installed
- Energizers meet safety standards
- Solar powered, 120, 220 or battery
- Lasts up to 10 years
- Economical control
- Pure aluminum wires and connectors for maximum corrosion resistance

SHOCK TAPE SYSTEM COMPONENTS - ITEMS DESCRIPTIONS

SHOCK TAPE

Electric bird tape. Clear acrylic adhesive and film with 2 flat aluminium wires. UV stable, peel & stick to many surfaces. 15 meters rolls.

ENERGIZERS

Available in solar/rechargeable, 120 Vac, 220 Vac or battery. Energizer powers 50-500 meters of shock tape system.

LEAD-IN WIRE

Two aluminum solid strand 20 gauge wires, side-by-side style, white, 20kv rated PVC insulation jacket. Paintable, in 30 meter spools.

SLEEVES

Aluminum sleeves for all wire connections. 100 sleeves per bag.

WIRE LOOPS

Mechanically fastens lead in wire to the structure. ¼" loop with 3/16" hole for fasteners. 50 loops per bag.

LINE TESTER

Eight light high voltage tester uses neon lights to measure pulses from 600-7,000 volts DC. Vital part of installation is testing connections.

DIGITAL TESTER

Digital high voltage tester with digital read-out. Measures pulses from 500-9,900 volts DC. 9-volt battery included with tester.

CRIMPER/STRIPPER

Up front crimp jaw design is a must for jumper wire and shock tape connections. Cuts and strip jumper wire insulated handles.

WARNING SIGN

Signs warn others of Electric shock potential. Plastic signs with mounting holes. 10 signs per bag.

WARNING STICKERS

Bring stickers warn others of Electric shock hazard. 100 signs per bag.

SCISSORS

Scissors to cut the Shock Tape to length. Cuts through rubber, plastic and heavy gage wire without any problem.

SPOOLER

Layout rolls of Shock Tape quickly. Holds tape on disengage quickly, Integrated belt clip.
